Text of the following rules will be read as amended below.

5.2 Vehicle Dimension

Vehicle width is recommended to be within 60 inches (1524mm) covering all its rigid or movable projected parts. Length of the vehicle is also not restricted but it is recommended to be within 100 inches (2540mm).

5.21.2 Brake Lights

A red brake light should be mounted on rear of vehicle to indicate about braking to other vehicle/s approaching from rear. When the brake is applied the brake light must be clearly visible and appear bright in daylight. The brake light shall be illuminated when the brake system is actuated, and completely extinguished when the brakes are released.

The light should be mounted at a height between 350mm and 1500mm measured vertically from ground. Light must be mounted such that it shines parallel to the ground, not up at an angle, up to a distance of 10 meters. The brake light must turn on during the brake test (as per rule 8.2.3) in order to score the brake light implementation marks (30 marks) mentioned in rule no. 8.13.1.

If the brake light is provided, the brake light must be activated immediately when the brakes are actuated.

5.21.5 USB Charging Port & Smartphone Holder

USB port should provide 5V supply for charging the smartphone. Also a smartphone holding device should be provided to mount the driver’s smartphone for charging or display purpose. This device should be of quick release type. It must be attached to vehicle firmly in order to withstand vibration and shocks during vehicle running.
